

Maximize Roof Life • Stop Leaks • Save Energy

Roof coatings provide protection from harmful UV damage, thermal shock cycles and corrosion which all cause roof failure. Applying quality roof coatings will extend the life of a roof 10-20 years. Roof coating warranties are renewable and never require a tear off.

All commercial roofs have seams and penetrations, where 90% of all leaks occur. Roof coatings are the only roof system that offers a completely seamless, waterproof membrane, eliminating the possibility for leaks in these areas.

Roof coatings, due to the highly reflective properties, greatly reduce rooftop temperatures allowing less heat transfer into the building. Some case studies have shown as much as a 50% reduction in energy usage after the installation of a quality white roof coating system.

EGreen installs sustainable roofing systems. We not only protect the building and its contents, we also help lower energy consumption all while recycling the existing roof, providing a win-win for the environment and the building owner. Our roofing systems have 10, 15 and 20 year renewable warranties. All of our roofs are seamless, fluid applied and energy star rated. We have options to restore an existing roof, maintain an existing roof and/or build a new seamless roof assembly.

With 20 years of experience in commercial roof coating applications, we can assist in product specification, as well as installation of our roof coating systems on virtually all commercial roof types. At EGreen, we offer the most cost effective and energy efficient roof system available on the market today. Let us put our experience to work for you.
